

The Well Making Workshops

SLQ Wiki Fabrication Lab 2026/05/03 20:53

The Well Making Workshops

Workshop Process

Background

This is the foundational GRUMPUS workshop.

Children and young people engage with artists to create artefacts - song, sculpture, stories etc - that are placed in The Well for others to draw and expand upon. This process will be developed by Thom Browning.

As part of this workshop process, each creator will be engaged to produce a description in their own words of the story behind their artefact, and give context and narrative richness to accompany their creation. These creator's stories may be captured using digital text (either contributed directly, or scribed for them) and short verbal responses captured as a digital recording. This information. (scrubbed of personal identifiers), will provide the content of a page of unique digital content, linked by QR code to any physical product present in the exhibition.

COVID-Safe Work Plan

This workshop will be delivered in a COVID-Safe format, within the health guidelines mandated by State Government, and in consultation with all delivery partners. Delivery offsite in schools will take place in accordance with the COVID-Safe policies of each school. As per State Library's requirements for all events a COVID Safe Risk Assessment has been prepared, and endorsed. It ensures that the workshop will:

- Adhere to physical distancing in all areas
- Ensure vigilant hygiene for all activities
- Providing a clean and sanitary environment
- Restricting delivery to well employees only

Workshop Planning

This workshop plan is a work-in-progress.

It has been designed with all stakeholders of the Grumpus project in mind, to achieve the goals of this stage of the project.

Once the workshop is delivered in schools over the coming months, it will evolve and grow. Updates

and learning will be logged throughout that process.

Objectives

- Engage children aged 6-10 in a workshop in which they are respected and valued as participants and collaborators.
- Work to build a positive relationship with teachers & parents of participants, building interest and positivity around the Grampus project.
- Introduce to participants the practice of collecting, documenting and sharing items as something core to library business.
- Facilitate a rich creative experience where participants use their imagination to dream up amazing ideas.
- Facilitate an active making experience where participants are invited manifest one of their ideas as an artefact.
- Scaffold the description of each participant's artefact, inviting them to write or record the narrative behind their work.
- Facilitate the documentation of all outputs, through text, images and audio recording.

Additionally:

- Ensure that guardians of participants receive a Creative Commons licensing form to return and sign, and that where no consent is given, that participants IP is not collected or shared.
- Ensure that relevant adults (teachers, parents) are provided with an information sheet on the Grampus project as an invitation to build longer term engagement.

Participants

This workshop is designed for children in a primary school age range, from 6-10.

The workshop can be fine tuned by facilitators to respond to the age range of the participants in their workshops.

The 'Making' component of the workshop is a module, meaning it can be swapped out and replaced with another activity depending on the age range of the participants.

The workshop could also be delivered to group of families, with children of various ages working with a parent or carer.

Materials

COVID Safe Kit: Required at every workshop.

Sanitisation & Cleaning Kit
* Hand Sanitiser
* Sanitizing Wipes
* Protective Gloves

Standard Kit Required for every workshop.

Presentation	Documentation	Transport / Storage
<ul style="list-style-type: none"> * Digital Projector * iPad or Laptop w HDMI Dongle * HDMI Cable 10m Extension Cable * Powerboard * Internet Connection 	<ul style="list-style-type: none"> * Pencils * Story Collection Forms * iPads or Laptops for direct to digital documentation * iPad chargers * Camera & Stand * Light Box Kit 	<ul style="list-style-type: none"> * A3 Documents Wallet for 2D Artefacts * Storage Boxes for 3D Artefacts * Tray / Tub for artefact transportation

Making Modules Kit One kit required per workshop, depending on your choice of module.

Drawing	Modelling	Paper Sculpture
<ul style="list-style-type: none"> *A3 Paper * Art Pens * Coloured Pencils * Crayons 	<ul style="list-style-type: none"> * A3 Paper as matt * Play-doh Classroom Kit * Modelling Materials 	<ul style="list-style-type: none"> * Coloured Paper * Sticky Tape

Pre-Preparation

Prior to each workshop, there is some preparation to do to ensure a smooth delivery achieves all desired objectives.

Communication

As the foundational workshop for the Grampus project, this is the beginning of a potentially long-term relationship with the communities we are working with, and should be used as an opportunity for relationship building just as much as it is for content collection.

With in-schools workshops, apart from the students themselves, there are three other groups within the community that we are aiming to connect with:

School Leadership: When engaging with school management to make contact and offer the workshop to their school, be sure to provide them with information on the bigger picture of the project, as well as the specifics of how their school can be involved. Let them know that the project allows students to explore creativity, design, and writing that connects it to Art, STEM and English subjects. Be specific about what you're suggesting in terms of logistics, dates, times, and which students you're interested in engaging with.

If you'd like, you can access this "[Invitation To Participate](#)" template we used.

Teachers: Having a positive connection with teachers when delivering workshops will make a big impact on how they engage with the project in the future. When you confirm your delivery in a school, send your school leadership contact the [Teacher Information Pack](#) that contains all the information they need to know before your arrival. If possible and appropriate, engage with the teacher in the delivery of the workshop to make them part of the experience. Alternatively, if the teacher uses the workshop as an opportunity to take a back seat, respect that decision.

Parents: We're keen to make sure that participants who go home excited about their experience have their best chance at telling a parent/carer that knows what they are talking about! Provide schools with an [Information Pack for Parents](#) (along with a consent & release form, described below), with a simple and clear explanation of the project and how their children can be involved. Crucially, we ask for parents to opt-in to email communications for the project. This allows us to follow up their child's experiences, including receiving notification emails alerting them that their child's submission to the project has been used to inspire a design or fabrication.

Consent & Release: All participants contributing content to the project will need to have their guardian complete a Creative Commons Licensing Agreement form, passed on to them directly or through a teacher ideally 1 week prior to the workshop date. Students who do not have permission can still participate in the workshop, but cannot submit their content to the project for future use.

Delivery: Part 1

Introduction

Acknowledgement of Country: This is an important moment to share with participants. It can be personalised by each individual based on their location and context.

"I pay my respects to the traditional owners of the land we are on today, and to their continuing connection to country and as custodians of their stories. I also want to share my respects with all First Nations people, especially any who are here with me today."

Facilitator introduces themselves, who they are and what they do.

"I'm here to ask you to work on a project with me called The Great & Grand Rumpus. It's a project where incredible ideas by children like you are, collected, shared and perhaps even brought to life."

It's important that the context of the project isn't given in its totality at the beginning of the workshop, but rather scaffolded in stages throughout as the information is most pertinent to the process.

"What are we going to do together today? We're going to use our imaginations, we're going to come up with incredible ideas, and we're going to draw up/make/explore some of those ideas."

"Who has an incredible imagination? Let's warm those imaginations up now."

Activity: Brain massage: Rub the forehead, face, neck. Ask students to make the noise of how their brain massage feels. Everyone copies.

[Movement Devising Game: Shout-Out](#)

This is a collaborative, non-competitive warm-up game that brings the group together, focuses attention, and in the process, creates a series of movements that will be documented and added to the Well as Things.

Step 1: In circle, ask each member of the group to come up with. gestural movement. Go around the

circle until everyone is done.

Step 2: Pick 4 movements from the group. Ask other members of the group to randomly assign words to those movements. When you call out a word, the group must perform that movement.

Step 4: Once you've done each word/movement individually, start calling out a sequence of words to create choreography.

Step 5: Write your favourite sequence on the board. Note the best movers in the group to engage in video documentation later.

Elapsed time: 5:00

Imagination, Creation, Collection

"Let's get started."

"I'm from State Library of Queensland and one of the things libraries do is collect things. All sorts of things! What sort of things do we collect?"

"Yes, books etc. (responding to the answers received). But we also collect stories, object, and ideas."

"Why do you think it's important to collect things like this, and be able to share them with others?"

"You know some of my favourite things in our collection are the weird and wonderful items. The strange and fantastical items. All the things that have come from the amazing imaginations like yours."

"Can I share a few of my favourite items - things collected from Queenslanders with amazing imaginations?"

[Tennis ball by Linda Newbown.](#)

[Tourist Attraction, The Big Mango, Bowen Queensland](#)

[Colorful dream by Jinchuang Zhang](#)

Facilitate a brief discussion about each item, with key questions aimed at inventing a story for each item.

Elapsed time: 15:00

Your Imagination

“As you can see, the imagination is a powerful tool for coming up with wonderful ideas”

Engage in a brief conversation exploring the following questions:

- Why are imaginations important?
- When do we use our imaginations?
- What does it feel like to use your imagination?
- What does it feel like when you have a great idea?

Task: “I'd like to use our imaginations today, to dream up some incredible ideas, to make/draw and write about those ideas, and to collect some of those ideas.”

“That's right, we'd like to collect some of your ideas for our collection as part of The Great & Grand Rumpus”

Elapsed time: 20:00

Visualisation

The following is a script for how this visualisation might be run, but of course can be edited.

“Let's start off by going on an adventure into our imaginations. Exploring our inner world. Seeing what amazing things we can find there.”

“One of the incredible things about going on a journey in your imagination is that it can be however you want. The rules of the real world don't apply! You might find the most strange and wonderful things there unlike anything you've ever seen. So as we delve into our imagination, let yourself be free to imagine all the incredible things that you want”.

“Everyone lie down in a spot that you're comfortable / Everyone put your hands down on your table, and rest your head on your hands. Now close your eyes”.

“Focus on your breathe, breathe in for 4, and out for 4. Again.”

“Now bring your attention to how you feel. Are you excited? Calm? Tired? Full of energy”

“Now take your focus to your body and imagine that you are standing in a room full of bright white light. There is nothing in the room except you, surrounded by white light. It's almost like you're floating. What does it feel like to be completely still, floating in white light”

“Now look around that room, there's nothing there, except....a door appearing. The door is getting

clearer and clearer until there it is, a real door, closed. In the handle there is a key."

"Imagine that you use that key and turn it in the lock. As you do, the door opens. You pull it open and walk in to another room - your dream room - what you see? What do you see?"

"Look down at your feet on the floor. What colour is the floor? What is it made of? Is it something regular, like tiles. Or is it something fantastical?"

"What about the walls? What colour are they? What texture are they? Is there anything special or amazing about them?"

"What's in the room? Are there any objects? Are they regular objects, or are they strange objects?"

"Imagine another door appearing. Walk towards it and open it. When you walk through the door, you find yourself outside. But what kind of environment are you in? Are you in a forest? A desert? Perhaps you're even underwater?"

"How do you move through this environment? Imagine yourself moving now as you look around and see all of the incredible things this environment has? What colour is the sky? The ground? Is it hot or cold?"

"Take a deep breathe through your nose and smell this place. What does it smell like?"

"Look around you and observe this incredible environment. What do you see? Do you see trees? Plants? What are they like? Are they different to regular plants?"

"Look around now and see a creature, or animal. But this isn't a regular earthly creature - it's an incredible, made-up creature from your imagination"

"Move towards this creature - but not too close that you scare it away. Take a close look. What is this creature? Does it have a name? What does it look like? What kind of skin does it have? Scales? Fur? Smooth? What colour? What other features does it have? Take a close look and remember all those features"

"Is your creature friendly? If it is give it a pat. If not - maybe take a few steps back. Imagine the creature makes a noise. What noise does it make? What is it trying to say to you?"

"And just like that, your creature moves away. How does it move? Does it run? Crawl? Fly? Goodbye creature! You say, as you wave goodbye".

" Turn around and take another long look at this environment. Is there anything else you see? Any details you missed? Take a long look, and then notice that over in the distance. A door is appearing."

"It's time to leave this wonderful place - you can always come back some time, now you know how. Walk towards the door. Reach towards the handle, and open the door. Take one last look at your environment and then walk through the door."

"You're back in the white room. Close the door. Stand in the middle of the white room full of light. Take some deep breathes. In-out. In-out. And when you're ready open your eyes, staying still, just reflecting on the feeling of having gone on an incredible journey. When you're ready, sit up."

Elapsed time: 30:00

Sharing

Moving back to a classroom format, with children facing the facilitator and a whiteboard, this is an opportunity to share the incredible ideas generated during the visualisation, and model the collaborative practice that is at the heart of the Grumpus project.

Prompt for all participants: "From all the things you imagined in your imaginary world, choose one part of it, something you really liked. It could be a space or room, an object, a plant or tree, a whole environment, a creature. Choose one thing that you think you might want to share or tell a story about.

Up to 10 participants will have time to share 1 idea each.

Questions for each participant:

- What's the thing you've chosen?
- What's it look like?
- Tell us a quick story about it.

All of the answers can be written and drawn on the board by the facilitator. At the end of the sharing session, the participants can hear back about the incredible combined world they have made together.

"Check this out - look at all the amazing things you've imagined. And these are just a few. Can I tell a quick story about the world you've all created?"

"These are incredible - and just a few of the ideas we've got between us. I'm wondering. Can we please collect your ideas to add to THE WELL OF IDEAS, the special place where we are keeping all the incredible ideas for The Great and Grand Rumpus?"

Elapsed time: 40:00

Making Module

This Making activity is designed to give participants the opportunity to create a version of their chosen idea as imagined in the workshop so far, and materialise it as an artwork that can be collected as an artefact.

This 30 minute component of the workshop is a module, meaning there are multiple options/modules for an activity that can be swapped in and out of the workshop depending on the age group of the participants, and the collections requirements of your workshop.

The current guidelines for the creation of artefacts to be collected as part of the Grumpus project are

as follows:

- Paper drawings or paintings no greater in size than A3.
- Non perishable sculptures using modelling clay no greater in size than 12cm x 12cm x 12cm.
- Paper sculptures using cardboard, paper and tape no greater in size than 12cm x 12cm x 12cm.
- Non tangible artefacts including movement or song, recorded via video.

Drawing Module

Overview

This is a simple drawing activity, designed to utilise the skills participants already have with pens and paper to document their ideas ready to be collected and shared with others.

Steps

Task 1: “Your task it to get those incredible ideas that you've chosen out of your imagination, and down onto paper.

Use these materials (pens, pencils and crayons) to show others the things that was in your imagination. It doesn't matter if it's not perfect, it only matters that it's yours!”

Task 2: “As you are drawing, start thinking about some of these questions:

Give your idea a name. Where is it found? What is its story? Three most important features?

Give each of the participants a single piece of A3 paper.

Ask participants to notice the size of the paper, and to think about scale. What do they want to draw? Where are they going to place their drawing? Remind them not to make their drawing too small or too large for the paper.

Let participants know that as soon as they receive their materials they are able to begin

Distribute drawing materials in containers, ensuring each group of students has access to a mix of materials.

As participants are drawing, remind them that it does not matter how their drawing turns out, what matters is that they trust themselves and let their imagination free through their pen/pencil onto the page.

Engage in discussion with groups as you go, prompting the questions posed above.

As participants begin to finish, let them know that they have two options - to draw another picture of their current or new idea, or to being writing the story of their object.

25 minutes into the activity, let the group know that they have 5 minutes remaining, and to begin to finish up. Enrol participants who have competed the task to collect pens - place all used materials in the USED storage tub ready for sanitation.

At 30 minutes, do something to get everyone's attention, like begin a reprise of the “Shout Out” game from the introduction of the workshop.

Haiku Module

Overview

This is an activity designed to give participants a frame in which to create poetry that describes the experience they've had on their imaginative journey, and to express their ideas through words.

Children in Queensland State Schools undertake a poetry unit in Year 4, focusing on comprehension of and creative response to a chosen text.

This activity, is quite different to that. It is about creative expression within the context of the participants own imagination and ideas. Because students will not have an understanding of the poetic form prior to this workshop, some time will be required to set it up.

Steps:

Give each of the participants the Haiku Poetry template.

Task 1: Do a quick sketch two things from your imaginative world. The things that stands our the most. It could be a room, an environment, or a creature. Use the square on the paper I've given you to draw that sketch. (10 minutes)

Task 2: Let's learn about Haiku poems. (10 minutes)

"Haiku is form of poetry from Japan. Haiku poems are short, with just three lines of word. A Haiku can share a concept, emotion or event"

"Each line has a set number - not of words - syllables. Five. Seven. Five. What's a syllable?"

"It's a sound in a word, made of a vowel, or a vowel and one or mort consonant. That sounds tricky, but it's actually very simple. You can count out the syllables in a word by listening to how you say it"

"Choose a word. Yesterday. Yes_ter_day. That word has three syllables."

Try a few more.

"So a Haiku has three line. Each line has a set number of syllables. Five. Seven. Five. Let's look at a Haiku as an example."

This is a poem by Matsuo Basho, written nearly 400 years ago! It's translated from Japanese by Earl Miner & Hiroko Odagiri.

The old pond is still A frog leaps right into it Splashing the water

"Let's sound out the syllables."

"Let's talk about the poem. What does it make you imagine?"

"Let's read one more. This poem is by Robtert Paul Chaney who is a young poet not much older than you."

Basking in the Sun while preening regal feathers Roar escapes from beak.

"Let's sound out the syllables."

"Let's talk about the poem. What does it make you imagine?"

"Now let's write a poem together."

"What's our poem about? Choose a creature you just imagined. Ok - (*for example*) The Space Unicorn. Let's show, not tell in our poem. How do we show the unicorn, rather than tell the reader what it is? We need to do that in 5 syllables"

"With it's single horn"

"What's it doing, or feeling? Travelling across space? Ok. 7 syllables"

"With it's single horn" "It blasts across galaxies"

"Now what do you want to leave the reader with. A twist? An image? A joke? A feeling"

"An image, of what? Ok - rainbow flames in seven syllables."

"With it's single horn" "It blasts across galaxies" "Rainbows trail from the cruiser"

"Well done. Any questions about Haiku?"

Task 3: Write two poems to tell your readers about the things you've drawn from your imagination. Try and show with your words, not tell. If you finish writing two, turn over and write some more! (20 minutes)

Ask participants to notice the size of the paper, and to think about scale. What do they want to draw? Where are they going to place their drawing? Remind them not to make their drawing too small or too large for the paper.

Let participants know that as soon as they receive their materials they are able to begin

Distribute drawing materials in containers, ensuring each group of students has access to a mix of materials.

As participants are writing, remind them that it does not matter how their poems turns out, what matters is that they trust themselves and let their imagination free.

Engage in discussion with individuals as you go. Look for participants who are having trouble starting.

As participants begin to finish, let them know that they can turn over and write another poem.

15 minutes into the activity, let the group know that they have 5 minutes remaining, and to begin to finish up. Enrol participants who have completed the task to collect pens - place all used materials in the USED storage tub ready for sanitation.

At 20 minutes, do something to get everyone's attention, like begin a reprise of the "Shout Out" game from the introduction of the workshop.

[Modelling Module](#)

Overview

This is an activity utilising a very familiar material for children to bring their ideas to life in 3 dimensions. Play dough!

Steps

Task 1: “Your task it to get those incredible ideas that you've chosen out of your imagination, and bring them to life using play dough.

“Use this material, and a simple tool (paddle pop sticks) to build and show others the things that were in your imagination. It doesn't matter if it's not perfect, it only matters that it's yours!”

“Your sculpture will need to fit inside one of our storage boxes. It can be either tall & upright like this. Or it can be long & flat like this. You'll be given a base sheet of cardboard to build your model on. As we hand out materials, let us know which base sheet you'd like. If you change your mind, that's ok.”

Hand out to each participant:

- 1 x cardboard base plate (one of two sizes) - 2 x 80g pieces of play-dough, 2 colours. Extra colours can be provided by negotiation. - 1 paddle pop stick

Let participants know that as soon as they receive their materials they are able to begin

Task 2: “As you are modelling, start thinking about some of these questions”

What's your Things name? Where is it found? What is its story? Three most important features?

As participants are modelling, remind them that it does not matter how their drawing turns out, what matters is that they trust themselves and let their imagination free through their hands into the dough.

Engage in discussion with groups as you go, prompting the questions posed above.

As participants begin to finish, let them know that they can start writing the story of their object.

25 minutes into the activity, let the group know that they have 5 minutes remaining, and to begin to finish up. Enrol participants who have competed the task to collect unused dough. ALL UNUSED DOUGH HANDLED BY PARTICIPANTS MUST BE DISCARDED.

At 30 minutes, do something to get everyone's attention, like begin a reprise of the “Shout Out” game from the introduction of the workshop.

Elapsed time: 70:00

Story Writing

The final component of this workshop is a writing activity, where participants are invited to jot down

the information they've created around their idea as part of the documentation process.

Supply participants with this Grampus collection worksheet and a HB pencil, with questions to answer (aligned with those already discussed in the making module).

These questions are all the same as those existing in the collection Portal on the Rumpus Land Online WIKI site, which we will use later on to capture answers direct to digital.

This section of the workshop will vary greatly depending on your age group, and the literacy levels of participants. Documentation can take place through audio, as well as written expression, so no pressure should be placed on participants to perform beyond their ability.

Elapsed time: 90:00

Bookmarking

Read out 1 or 2 of the stories that have been created, and congratulate the group on the incredible work they've done.

“Now is the time to place a bookmark in our time together today. You've done such an incredible job, I want to work with you all this afternoon in smaller groups to contribute your ideas to our collect. We will type our stories, do some audio interviews where you tell us all about your ideas, and take a photo of your work, so we can share it with others”

“Who knows. Some of these ideas might come to life! Other young people, and adults, people who like to design and build things, are going to be looking through this collection of ideas for inspiration to create an amazing world full of amazing places and giants creatures. Would you like to know more about that in the future? Should I keep in touch with your teacher and principal / parents?”

“I'm going to hold onto your artefacts and stories, and see you all later this a

“Great Thankyou! See you later today”

Elapsed time: 90:00

Post Workshop

Engage in the COVID Safe Workshop Check-list for post workshop cleaning.

Place all 2D artefacts in a storage folder to keep them flat.

Place all 3D artefacts in a 12×12 storage box for transportation.

Pack up all materials & equipment, and prepare for Part 2.

Delivery Part 2: Documentation

The documentation of the artefacts and stories produced in this workshop is paramount to the Grampus project. To prioritise this process, documentation is allocated significant time and space, run as a separate process to the making workshops outlined above in Part A.

In a school, this is designed to fit standard lesson times and structure, to be able to complete one class from start to finish in one go. In other contexts, it can be restructured to suit any context.

A key strategy for this part of the workshop is to document direct to digital. Having participants input their own artefacts and stories into 'THE WELL' maintains their agency, allows them to write in their own words and style, as well as cutting out the significant work involved in transcribing the potentially hundreds of submissions that we will be collecting as part of the project.

We can achieve this using the custom online space created for the project [Rumpus Land Land](#), hosted on the State Library WIKI. This space will feature THE PORTAL, online forms designed as a tool to submit contributions into 'THE WELL', the place in which all community contributions to the project are stored. What's very cool about this, is that the SLQ WIKI is a part of the State Library collection, which means that all the contributions to this project by the communities we work with will become part of the collection, forever!

The number of participants that are able to take part in the workshop at any one time will vary depending on the age range of the group (younger children will need more support to input their stories)

Pre-Preparation

A space should be setup with the number of iPads or Computers you require. In a school, you may be able to utilise an existing computer lab.

Crucial thing alert! This process relies on a working internet connection and a web browser that supports the functionality of the SLQ WIKI. If you're working offsite in school, internet is not always accessible, so the best option here is to travel with a Telstra wireless internet hotspot. Test all your equipment for compatibility before you leave so you're confident that the form will work on your devices.

Each participant should have their Story Collection Form with them, to use as the basis of their submission.

You should have all of the artefacts with you, ready to show and document.

Make sure you check with teachers/parents that only students who have a completed consent & release form participate in Part 2.

Audio Recording

Framing: "A big part of what State Library does when they are collecting new items, is work to make sure we have as much information about those objects as possible. That's what we want to do today. Record you telling you stories, take some photographs of your artwork, and collect all that info into our project Portal."

Participants are then to make an audio recording - either reading their story, or ideally and if comfortable, to talk to their artefact in free form in response to the questions prompted on the their written work.

Recording should ideally be done on the iPad that participants are using to document their work. Whilst the quality is not the highest, the file size is upload friendly, especially when using mobile internet.

Recordings should be no longer than 1-2 minutes, and ideally should only feature the voice of the participants involved in the creation of that artefact.

Each recording should feature a label at the start, identifying the name of the artefact.

Elapsed time: 8:00

Photography

The final task of this process is to take a series of high quality photographs capturing the artefact itself.

For 2D artefacts, scanning may be a better option, done offsite.

For 3D artefacts, they should ideally be photographed from the front, sides and back, but with no more 4 images total. If possible, photographing the item in a portable light box makes for consistent documentation in a variety of lit environments.

Again, using the iPad that the participant is using to document their work is best. That way the image and audio recording are on the device ready for upload during the next step.

Elapsed time: 12:00

Documentation

Type up all your information into a Form on these iPads.

Task: Start typing each response into the form. If you've got any questions about a part of the form, just ask.

Questions in form include:

About You:	About Your Thing:
First Name:	Name of your thing: Where is it found? What's its story? Three most important features:
Last Name:	
School:	
Suburb:	
Class:	
Age:	
Contact Email:	
Teacher Name:	
Type of Thing	

There are then two UPLOAD buttons for both audio and video, ideally located on the same iPad in use from the steps above.

Upon submission, a new Imagined Thing (the name we are assigning these artefacts) in THE WELL will be generated. The form creates a new page with the content submitted, and gives it a unique page name.

Each thing THING will feature a QR Code that points to the Imagined Thing's URL.

Connect the sticker printer and wirelessly to the iPad to print 2 copies of the QR code.

1. For the tangible artefact. On the back of the drawing. On the box housing the sculpture.
2. For the participant. Use a pre-stamped Great & Grand Rumpus business card, sticking the QR code to the back.
3. Write the number of the Imagined Thing on the card and the artefact, based on the unique pagename number it has been given in The Well. eg Imagined Thing 10.

Elapsed time: 22:00

Reflection

Once this process complete, ask participants to make a few reflections on their experience.

- What was something the enjoyed?
- What was something that was a challenge?
- What was your favourite idea you heard?

Thank participants for their contribution. Give them a sticker/card with the QR code for their idea.

Let participants know that their teacher/parent has a link to the PORTAL where their idea now lives.

Let participants know what will happen to their artefact - it will be collected at the State Library so we can share the ideas with others.

Elapsed time: 25:00

Finish
