Making the Apocalypse 4

This session will run from 9-12

The Plan Saturday 4th Nov

- Walk through test with the A.I recording and alarm sound, also test having someone with the ipad triggering the VO recordings on 'go button'.
- tunnel design and space
- set up all tables and chairs with the real deal
- work on ending with the rope, triggering and recording
- Do we need an ipad stand?
- Bump in roles
- chat about inviting friends and family for test audience
- design a stencil to laser cut for spray painting on the sides of the tunnels?

Preparation

Reflection

This session flew by. I spent most of the time in the innovation lab testing using the ipad and triggering app. We had someone with the headphones on doing the experience and another person triggering it. We found a few glitches and spent time relaying them to another person who is working on editing the sound. Very productive on this front.

Others spent time in the fab lab making lanyards and helmets. We spray painted the helmet and it came up great. The group has decided to meet up on Wednesday from 4pm to further test the sound and to check that using the app and 4 wireless headphones in the same space.

Thursday some of the group will come as well to continue to make things that need making. The session ended up running from 9-1.30pm.
