Content Development 1: Arduino in Motion

Content Development 1: Arduino in Motion

Saturday 7th July 10-1pm

The plan

Using the skills from 101 build using light to activate the jellyfish described in: Undersea Disco: Jelly Fish

Code was provided and you can adjust as you want to. Then attach the lights to the jellyfish using glue guns.

Reflection

Full house of 15 people attended.

If we had done a 101 into programming in the first workshop. Intro to programming with a arduino now is what we would move onto.

The people who benefitted most in this series were people that already had some programming skills.

A number of people brought along their own laptops to work on which worked well.
