Undersea Disco: Jelly Fish

Idea brief: [IDEAS BRIEF 1: Wiggly Tooth Shark](#)

The Wiggly Tooth Shark which came from Idea Brief 1 included the concept of a disco under the sea, reached through the shark's mouth.

Designed by:

These jellyfish were one of the first designs to come across to The Edge and one high school teacher and a design student from University of Canberra spent time working on the design. Together they made a prototype and a file for cutting on the laser. By using cotton on the legs they were able to capture the movement of the jellyfish.

Made by: Many people were involved in the fabrication of the 25 jellyfish! From Edge regulars at Hack the evening to a new visitor Marcus who spent a good whack of time on them.

Activation by:

The colour of the jellyfish was activated during the Arduino in motion workshop [Content Development 1: Arduino in Motion](#)
