Compute Stick

Compute Stick is a portable PC that's great for signage. Here's some instructions for setting up a video to autoplay MP4 off a USB stick on the digital signage screens on level one of the edge (or any other HDMI-equipped screen for that matter)

- Put your mp4 file inside a folder named "file" on your USB stick
- Plug the compute stick into the HDMI 2 port on the screen and select this port as the input for the screen
- Plug in 5v power supply
- Compute stick should fire up, and as long as the compute stick has the right bat file installed, it should auto play your mp4 file.

If it doesn't

- go to the Bat file in `c:\ProgramData\Microsoft\windows\start menu\Programs\StartUp` and make sure that this autoplayscript is picking up from the USB stick

`"C:\ProgramFiles\VideoLAN\VLC\vlc.exe" d:\file\ -fullscreen`
