Coding

Code.org - Dedicated to expanding access to computer science, Code.org provides a variety of fun, hour-long tutorials for students of all ages. The tutorials work well in the library learning environment because they require minimal prep time and allow young people to work at their own pace and skill level.

Hour of Code - Start planning now for the annual Hour of Code, a global movement reaching tens of millions of students in 180+ countries. Anyone, anywhere can organise an event.

Glitch - Create web apps using the millions of free web apps instantly or remix them to make your own. Using web languages such as HTML, JavaScript and Style Sheets, children can collaborate and learn the essential tools that power the web.
