

NEW AI TO REVOLUTIONIZE THE WORLD

Breaking news from the Brigdon Society of Science, as a newly developed Artificial Intelligence (A.I) promises to revolutionize the way that we look at the world's problems. The government funded project puts Brigdon's top scientific minds together to create an intelligent super-computer to answer a single question; "How can we save the world?" There are early claims that this new computer development may unlock the answers to current world problems including pollution levels, war, resource shortages and human rights. This new AI development has yet to be officially named but a beta prototype is reputedly, currently in operation.
