

Year: 4 | Day: 255

No one could have predicted what that monstrous computer did. Because of him, we've been in this bunker for nearly five years, I had hoped that it would never be needed, and we are running out of supplies, and Time. It is only a matter of time before he finds us and destroys the bunker, and us as well.

But not if this works.

The way I figure it, the only way that we can survive a AI is to outsmart the AI. and thing that can outsmart an AI, is a better AI. I will name this AI, ARTIFACT, Ironically of course.

Project ARTIFACT, when active, will be the single smartest Artificial Intelligence program the world has ever seen. They will be given the task of creating a utopia for the Brigdon survivors. He will be able to keep the people provided for, happy, and most importantly, safe.

ARTIFACT will be active in 5 days.
